DETAILED ACTION

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 1-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wilcox. Wilcox teaches the invention substantially as claimed. Wilcox teaches a self contained distillation apparatus which is a self contained alcohol still. A series of cooling coils are arranged in an upper pot in and inclined manner which used a cooling water to provide condensing and reflux. The lower pot includes a chamber where evaporation takes place. [Note the abstract, column 1, lines 15-45 and Figure 1]. Wilcox specifically teaches and claims an alcohol still comprising an evaporator zone, a condenser zone position above the evaporator zone and a single reflux container means of predetermined horizontal cross sectional area positioned between the evaporator and condenser zone.

However, Wilcox does not teach providing a anti-leak O-shaped ring provided at the junction of the upper pot and lower pot.

Application/Control Number: 10/714,618

Art Unit: 1764

It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide an alcohol still from the teachings of Wilcox because as stated above, Wilcox teaches the same construction and arrangement of elements which provides wet/dry distiller which includes basically the arrange of an upper pot and lower pot and includes a singe reflux container means which is functionally equivalent to applicants inclined annulation. Also taught by Wilcox is providing a dividing partition (23) which is included in the upper portion of the evaporation chamber forming a condensate table. The space between the upper and lower chambers is sized and shaped to prevent leakage of vapor thus rendering applicant's invention as a whole obvious to one having ordinary skill in the art at the time the invention was made.

- 2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Roan et al. teach a solar distilling apparatus. Huang et al. teach a water distiller. Fox teach a distilling and rectifying apparatus. Lanes teach an apparatus for making wine. Kiefer teach a process of making alcohol. Heuser teach a process of making alcohol reduced beverages. Bjerg teach an alcoholic beverage still with domed conduits for vapor flow and frustum apertures for co current vapor/liquid flow. Boucher et al. teach a volatiles separator and concentrator.
- 3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to N. Bhat whose telephone number is 571-272-1397. The examiner can normally be reached on Monday-Friday, 9:30AM-6:00PM.

Application/Control Number: 10/714,618

Art Unit: 1764

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Glenn Caldarola can be reached on 571-272-1444. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
